

Dear Prof. Kreuzer,

This letter is to recommend Lorenz Hofmann-Wellenhof for the program at the Stevens Institute of Technology.

I worked with Lorenz for 8 months as his bachelor project supervisor, while I was at the Chair of the Digital Libraries and Web Information Systems at the University of Passau. His project consisted on the creation of a componentized and standardized pipeline for facilitating the construction of Natural Language Processing applications. I also interacted with Lorenz as a lecturer during the Text Mining Project course, which is a hybrid Masters and Bachelors course. By the end of the course, Lorenz was among of the best performing students, surpassing in performance many of the Masters students.

I consider the topic that Lorenz took for his project conceptually complex for a bachelors project level. Despite its complexity, Lorenz was fully able to work independently and creatively on the project, taking full responsibility and ownership on the topic.

I strongly recommend Lorenz for the exchange program. I believe he has the right academic and personal attributes to make full use of this opportunity.

Please do not hesitate to contact me in case any further information is needed.

Dr. Andre Freitas

Lecturer (Assistant Professor)
